Gear assembly line with recirculating workpiece carrier

Assignment:
Design and manufacture a semi-automatic assembly line with workpiece carrier transport for gears in large lots.

Special features:
• Measurement and assembly data are assigned directly to the gear
• Force-displacement pressing processes with master computer
• Disk pack and sealing ring assembly
• Leakage test, data matrix imprinting
Design and manufacture a semi-automatic assembly line with workpiece carrier transport for gears in large lots.

- Measurement and assembly data assigned directly to the gear
- Force-displacement pressing processes with master computer
- Disk pack and sealing ring assembly
- Leakage test, data matrix imprinting
